Introduction

The design system was inspired from chess.com which is one of the largest chess platforms in the world dedicated for chess enthusiasts. The site offers a lot of features: users can play various forms of real-time chess games online with other players worldwide, one can also play with computers, solve puzzles, train and learn chess only to name a few.

I have created the system, titled *BongCloud*, with various screens conceptually similar to chess.com utilizing design principles and various components like cards, forms, buttons, navbar, color palette, images, icons and texts. Below you can see the list of UI elements used to create the overall system.

Design System

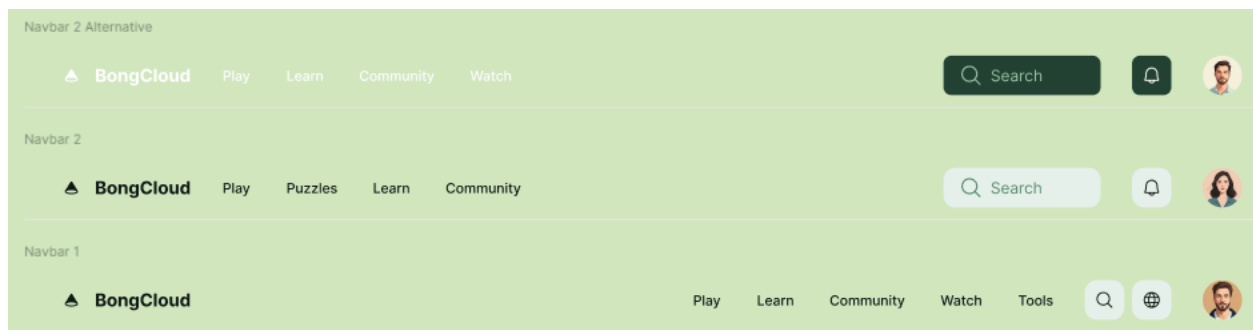

Theme

The system would have two themes. There's a light mode theme and an alternate theme which is quite similar to the dark theme. I have designed elements covering both types of themes - light and dark. The colour of the themes are:

Navbar

I have designed two types of navbars. I also portrayed a navbar with a dark theme. The navbar has the title of the app alongside its icon, tabs, profile picture icon and other icons.

The Navbar named “Navbar 2 alternative” is designed for dark mode.

Colour palette

The colours that I have chosen are inspired by chess.com itself. The main colours are quite similar to the inspired app but then again the inspired app has a lot of themes which my design doesn't have. The colour palette:

My system has two themes at its core. Some contrasting colours were chosen keeping the dark theme in mind. Some of the contrasting colours really pop out and highlight certain items and elements.

Typography

Choosing the typography was based on three things: type classifications, typeface and the font. As for the type classification I went for a more modern look, a clean and minimalist look. So I picked sans as type classification and sans serif typeface. The font that I chose was *Inter*. Various font sizes of *Inter* were used throughout the design.

Buttons

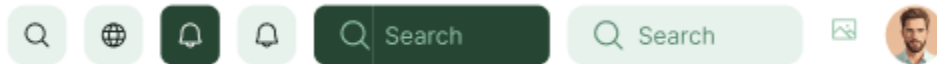

The system has various sizes of buttons for different actions. There are buttons designed for themes. There are light ones and also dark ones.

There are different in sizes, scaling based on the importance, emphasis and the size of the other elements of the screen. There's also a radio button.

Icons

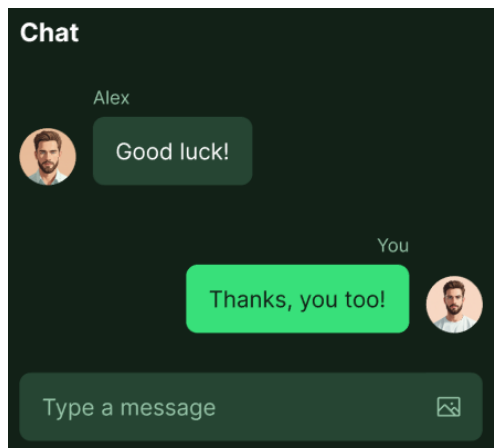

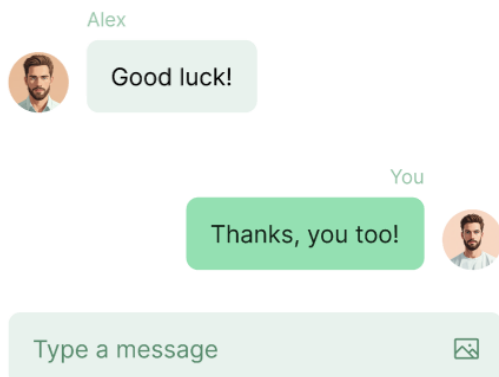

Several types of easy to understand icons were utilized to go along with common design conventions and to convey meaning without needing too much space.

Chat System

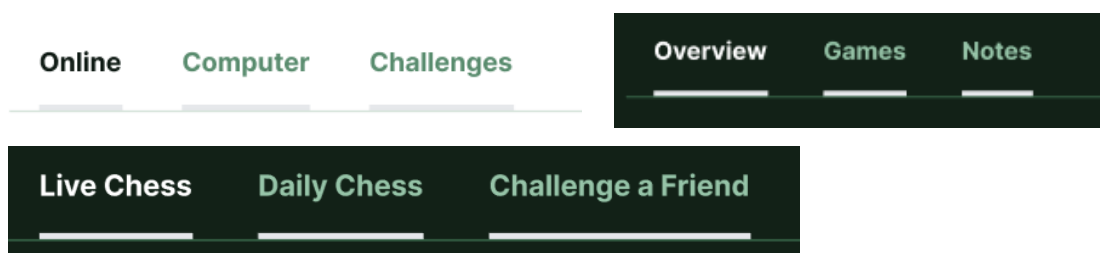

The app has a chat system for players to communicate during matches and for private messages between friends. Both light and dark themed chat has been shown here.

Chat

Tabs

Tabs are an efficient way to navigate through an app and perform various actions within the app. The use of tabs makes the user journey much easier and the experience much more enjoyable. That's why a lot of tabs were utilized to enhance the user experience.

Time Control

10 min

30 min

1 min

3 min

Custom

Cards

As I have mentioned before, I went for a clean and modern look with the designs and one of the elements that really helped with achieve that is the use of cards.

Stats

1542

Rating

55%

Win Rate

45%

Accuracy

Although a table can't be classified as a card element, it still utilizes the concept of a card element. Here's an example use of a table element:

move history	
Move	Player
1. e4	White
1... c5	Black
2. Nf3	White
2... d6	Black
3. d4	White

Now here we have another example of use of cards:

Play a Friend

Challenge a friend to a match

Invite a friend to play a game with custom settings.

Invite

Custom Game

Set up your own game

Customize the time control, variant, and other settings to create your perfect game.

Create

Rated Game

Compete for rating points

Play a rated game to improve your rating and compete on the leaderboard.

Play

Quick Match

Play a random opponent

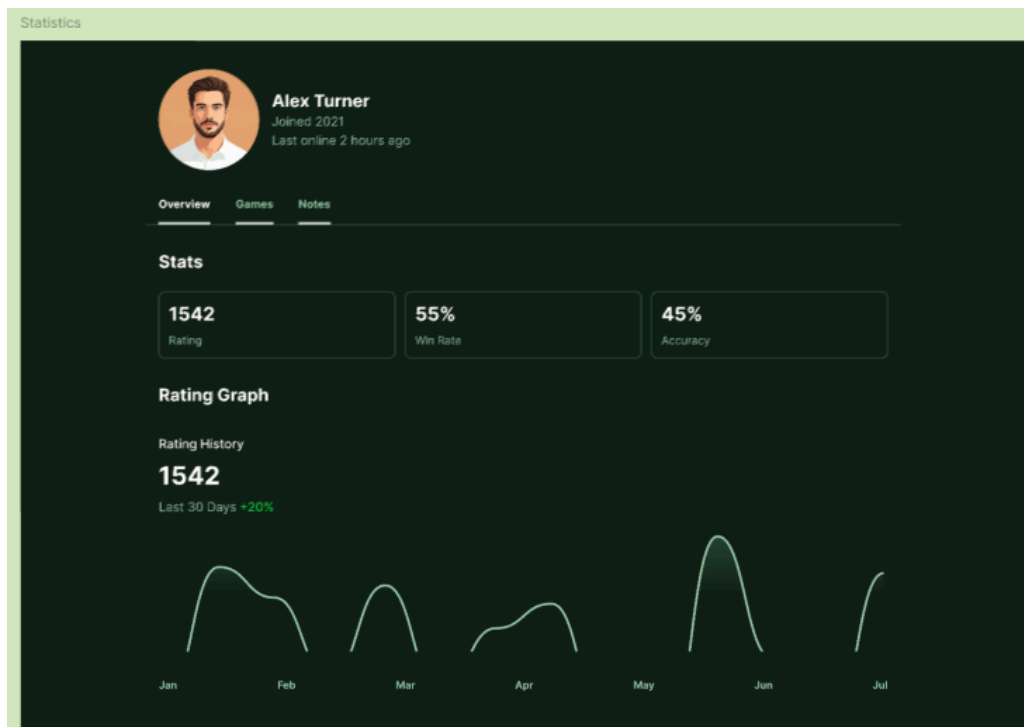

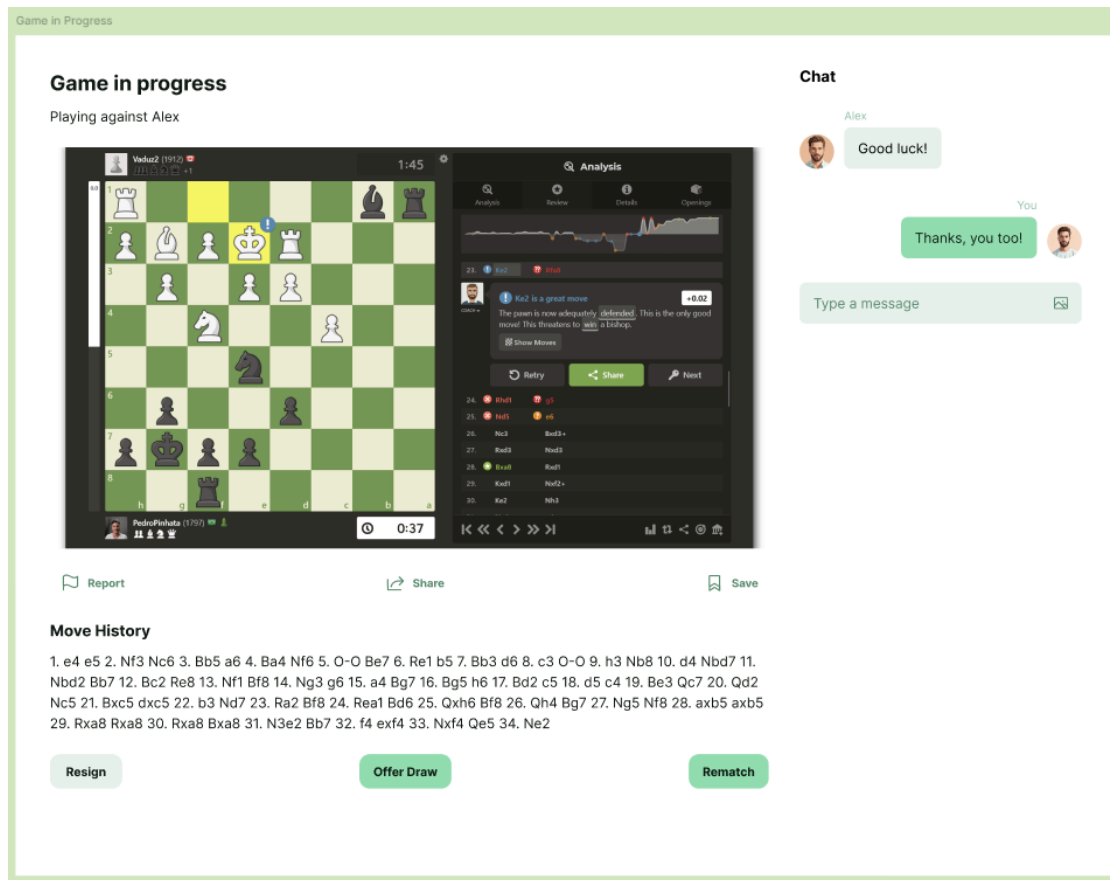

Get paired with a player of similar skill level for a standard chess game.

Play

Example of App's UI

Here are some screenshots showing the overall UI of the app.
